

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending December 31, 2000	Percentage of Total
Biomass power	0%
Coal-fired power	22%
Hydro power	0%
Natural gas-fired power	2%
Nuclear power	75%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	1%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending December 31, 2000

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWhs) PRODUCED from KNOWN[‡] Sources for the 12 months ending December 31, 2000	
Carbon dioxide	511.95 lbs.
Nitrogen oxides	1.26 lbs.
Sulfur dioxide	1.44 lbs.
High level nuclear waste	0.0046 lbs.
Low level nuclear waste	0.0001 cubic feet

[‡]1% of the total electricity supplied was purchased from other suppliers and the amounts of emissions and amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site; www.icc.state.il.us.

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 1/01/00 and 12/31/00.

For comparison purposes, the following shows the Midwest states' (Illinois, Wisconsin, Michigan, Ohio and Indiana) electric utilities averages for sources of electricity generation and emissions for 1998.* 75 percent of ComEd's electricity is generated by nuclear power, and another 2 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 70% less than the regional average for carbon dioxide, 81% less for nitrogen oxides, and 89% less for sulfur dioxide.

(Midwest Sources—rounded to the nearest whole percent)

Coal-fired power	79%
Hydro power	1%
Natural gas-fired power	2%
Nuclear power	18%
Oil-fired power	less than 1%
Renewables	less than 1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Emissions—pounds per 1000 kilowatt-hours)

Carbon dioxide	1,711.28 lbs.
Nitrogen oxides	6.80 lbs.
Sulfur dioxide	13.00 lbs.

Renewable energy is making a difference to our environment. Solar, wind, small hydro and landfill gas to energy are some of the renewable energy resources available in Illinois. These resources generate environmental benefits in the form of reduced impacts on the air, water and land by lowering the use of electricity produced from fossil fuels. For example, last year landfill gas to energy purchased by ComEd and included in our EcoPowerSM renewable energy program reduced the amount of carbon dioxide in the air by over 587 million pounds, sulfur dioxide by over 4 million pounds and nitrogen oxides by over 2 million pounds.

To promote the benefits of renewable energy, ComEd is working with the Environmental Resources Trust Inc. to encourage new renewable energy development in Illinois through the promotion of EcoPowerSM and the development of a Renewable Energy Reinvestment Fund. ComEd's Wind and Photovoltaic Generation Pricing Experiment and SPIRE Solar Chicago partnership are other initiatives promoting renewable energy resources in our service territory. Through these and other programs, ComEd is helping to make a difference in our environment and promote sustainable resource development in Illinois. If you would like to learn more about renewable energy, the Wind and Photovoltaic Generation Pricing Experiment, and installing a wind or PV system, call 1-877-451-3915 to request a Capture the Power Information Kit.

EcoPowerSM is a servicemark of the Environmental Resources Trust Inc., a District of Columbia non-profit corporation affiliated with the Environmental Defense.
